

Press Release

net-files Virtual Data and Project Rooms Now Offer Managed File Transfer Functionality

New version allows for the secure, simple, audited exchange of confidential data

Burghausen, 11th April 2013 – The newest version of the net-files data/project room offers a secure and at the same time easy-to-use alternative to e-mail and FTP. Use the data or project room to exchange business-critical documents within and beyond your company boundaries. You can also use net-files to send and receive files up to 2GB simply and easily.

In developing the net-files Managed File Transfer functionality, the emphasis was on user friendliness as well as security. In many companies, sensitive data is regularly sent unprotected over e-mail or FTP, or exchanged using unsafe consumer cloud sharing solutions, simply because users want access to a quick and easy file sharing method. The successful cloud applications net-files Business and net-files Dataroom appeal particularly to users who are looking for an effective solution that can be used without extensive training or practice.

The new Managed File Transfer features are integrated directly into the net-files data and project room solutions, and offer 256-bit SSL encryption, both when sending and receiving data. In addition, the functionality offers password protection, delivery receipts and detailed logging, and allows you to restrict document availability. The functions are operated like in an e-mail application.

In order to use net-files Managed File Transfer, you will only need a web browser, and you will not need to download or install any additional software. The new functionality for secure file exchange can be tested within a data or project room free of charge for two weeks: see www.net-files.com.

About net-files GmbH

With more than ten years' experience, net-files GmbH is one of the first and leading German providers of project and data rooms. The net-files cloud service (www.net-files.de), offers companies and distributed project teams a web-based application for online document management, secure file sharing and efficient collaboration.
