

Press Release

net-files trusts to M-net data centers Security made in Germany

Burghausen/Munich, July 8, 2014 – With immediate effect, net-files GmbH, a provider of virtual data and project rooms, has entrusted the housing and protection of its servers to the M-net data centers in Munich.

Two factors played a key role in shaping net-files GmbH's decision: One is M-net's modern, high-security data center infrastructure that is physically located in Germany. The other is the fact that M-net is a German company with no US participation. Like net-files itself, M-net is thus governed solely by the laws and strict data protection provisions of the Federal Republic of Germany.

"As a provider of virtual data rooms, we give absolute top priority to the security and protection of our customers' data," says Thomas Krempl, founder and Managing Director of net-files GmbH. "Logically, therefore, we place extremely high demands on access controls and the failsafe accommodation and connectivity of our servers. Protection against access by government agencies must be guaranteed at all times. M-net is thus the ideal partner to safeguard our customers' legitimate demand for optimal security and data protection."

The Munich-based data center used by net-files features 360° security systems, round-the-clock surveillance 365 days a year, multi-level access controls, automatic fire protection systems, advanced air-conditioning technology and an uninterruptible power supply. The eco Association of the German Internet Industry recently conducted a Datacenter Star Audit here – and awarded four stars to the M-net facility. "Customers who use the data links and server infrastructure at our data center can rest assured that their data never leaves our networks," explains Ralf Strassberger, head of the Corporate Clients unit at M-net. "Our data centers are located here in Bavaria and are monitored and maintained by our own technicians. At M-net, security comes right at the top of our list of priorities."

net-files gives companies a secure data transfer facility and a secure, central online document management system, complete with detailed access rights and mobile access options. This cloud-based solution makes it simplicity itself to exchange data within the company or with customers and suppliers, and to set up safe data rooms for M&A projects, due diligence tests, asset transactions, board communication, real estate management and contract management, for example.

About net-files GmbH

With more than ten years' experience, net-files GmbH is one of the first and leading German providers of project and data rooms. The net-files cloud service (www.net-files.de) offers companies and distributed project teams a web-based application for online document management, secure file sharing and efficient collaboration.
